

WEEKLY REVIEW

TASE RESEARCH UNIT

Trading on the stock exchange will open against the backdrop of US-Iran talks and a tense ceasefire: all eyes are on Trump's deadline.

The trading week will be shortened, and there will be no trading on Tuesday and Wednesday due to Memorial Day and Independence Day

Overview of the trading week on TASE- 20, April 2026

Stock Market:

The trading week ended with slight declines compared to gains in international markets.

The last trading week began with uncertainty due to tensions with Iran but ended on an optimistic note following Trump's statements on progress toward an agreement. Yield gaps versus abroad remained high, as the dollar and euro declined by about 6% and 5.9% respectively since the start of the year, leading to zero or negative returns for local investors compared to US and European indices. The TA-35 index fell 0.83% this week and rose 21.33% since the start of the year, TA-90 rose 0.1% and 4.12%, and TA-125 fell 0.62% and rose 17.62%. The S&P 500 rose 4.6% this week and 4.5% since the start of the year, the DAX rose 3.8% and 0.9%, and the FTSE100 rose 0.7% and 8.6%. In the upcoming week, there will be no trading due to Memorial Day and Independence Day; the exchange will resume operations on Thursday, and early derivatives expiration will take place on Friday.

Bond Market:

The government bond market posted weekly gains following a drop in risk premium and oil prices, and an optimistic atmosphere regarding a possible end to the war with Iran and a ceasefire with Lebanon. Yields for 10-year bonds declined during the week: US – 4.24%, Germany – 2.96%, Israel – 3.89%. The Tel-Gov General Index rose 0.29% this week and 0.8% since the start of the year; Tel-Gov Shekel Index rose 0.43% and 1.47%; Tel-Gov CPI-linked Index rose 0.14% and fell 0.25%. The market is pricing in two interest rate cuts this year, according to Bank of Israel forecasts if the war ends by the end of April.

Debt Raising Market:

Last week, the corporate bond market raised about 11 billion shekels, led by banks that raised a net 6.8 billion shekels. Bank Leumi led with a raise of about 4.1 billion shekels in two series, Discount Bank raised about 1.6 billion shekels, and Bank Hapoalim raised about 1 billion shekels. Migdal and Clal Insurance together raised about 1.1 billion shekels in new series.

Mutual Funds Market:

Last week, the mutual funds market raised about 1.8 billion shekels net, led by money market funds, foreign funds, and local bond funds. As of April 16, 2026, the passive and active market totals approximately 799.5 billion shekels net, and since the start of the year, net raises have accumulated to about 21.4 billion shekels. For the second consecutive week, the public purchased index-tracking mutual funds abroad, totaling 437 million shekels, and since the beginning of the month, raises have reached 929 million shekels. Since the start of the year, the public has redeemed 4.5 billion shekels from these funds.

Stock Market

Trading on the stock exchange will open against the backdrop of US-Iran talks and a tense ceasefire: all eyes are on Trump's deadline.

The trading week ended with slight declines compared to rising prices in international markets.

The last trading week opened with concerns that the ceasefire with Iran was on the verge of collapse, as the American delegation returned from Pakistan without an agreement and Trump imposed a naval blockade on the Iranians. Yet, international markets were optimistic, buoyed by Trump's declarations throughout the week that the war with Iran was nearing its end and that agreements had been reached regarding the Iranian nuclear program. Meanwhile, following the announcement of a ceasefire with Lebanon, the Iranians declared the Strait of Hormuz open: oil prices reacted to the Iranian statement with sharp declines, dropping about 15% during the week. WTI oil fell to \$83.85 per barrel, while Brent slipped to \$90.38 per barrel.

Despite the significant correction in international markets during the week, yield gaps between the local market and international markets remain significantly higher than at the beginning of the year. It's also worth noting that the drop in the dollar and euro against the shekel from the start of the year—by about 6.08% and 5.87% respectively—left investors with zero returns compared to US market indices and negative returns compared to leading European indices, the DAX and CAC.

The TA-35 index fell by 0.83% over the past week and is up 21.33% since the beginning of the year; the TA-90 index rose by 0.1% for the week and by 4.12% since the start of the year; the TA-125 index dropped by 0.62% for the week and is up 17.62% year-to-date. Abroad, the S&P 500 rose by 4.6% for the week and by 4.5% so far this year; the DAX increased by 3.8% this week and by 0.9% year-to-date, and the FTSE100 gained 0.7% this week and 8.6% since the start of the year.

Return of leading global indices since the beginning of 2026

Investor Movements: The public has purchased approximately 1.2 billion shekels in stocks and ETFs since the start of the war.

The “Epic Fury” war began with great optimism among the public, reflected in increased purchases of stocks in the Israeli market—both through mutual funds and direct stock acquisitions. During the first three weeks of the war, the public directly purchased stocks totaling about 1.1 billion shekels. However, as fighting continued and concerns of a prolonged campaign grew, starting from the fourth week, the public began to change its investment strategy and reduce its holdings in mutual funds and stocks, though the pace of selling was lower compared to the volume of purchases made at the start of the war (from the fourth week, the public sold about 550 million shekels net). In the latest trading week, following the announcement of a ceasefire with Lebanon, the public continued to buy stocks and ETFs, purchasing about 360 million shekels in stocks and ETFs directly during the week; since the beginning of the war, the public has acquired a remarkable net sum of approximately 1.2 billion shekels.

Meanwhile, institutional entities continue to realize profits, selling about 143 million shekels net since the start of the war—mainly in ETFs investing in the TA-125 index—and simultaneously purchasing funds investing in the TA-35 index, albeit in smaller amounts. Additionally, foreign investors continued selling shares in banks and insurance companies during the trading week.

Bond Market:

Yields are falling – the local market is aligning with the global trend.

The government bond market recorded gains for the week, like the stock exchanges in the US and Europe, following a decrease in risk premium, oil prices, and optimistic sentiment surrounding a possible end to the war. In the background, there were Trump announcements about progress toward an agreement with Iran and a declaration of a ceasefire with Lebanon.

The US 10-year government bond yield as of last Friday stood at 4.24%, compared to 3.94% on the eve of the war. The German 10-year bond finished the trading week at a yield of 2.96%, whereas on the eve of the war, the yield was 2.64%. The Israeli government 10-year bond traded last Friday at 3.89%, compared to 3.84% on the eve of the war.

The Tel-Gov General Index recorded a weekly increase of 0.29% and a rise of 0.8% since the beginning of the year. The Tel-Gov Shekel Index rose by 0.43% from the start of the week and by 1.47% since the beginning of the year. The Tel-Gov CPI-linked Index rose by 0.14% since the start of the week and fell by

0.25% since the beginning of the year, while the long-term CPI-linked indices declined during the week: Tel-Gov CPI-linked 10+ and Tel-Gov CPI-linked 15+ decreased by 0.45% and 0.7%, respectively.

The Tel-Gov Shekel Index rose by 0.43% from the start of the week and by 1.47% since the beginning of the year. Tel-Gov Shekel 10+ and Tel-Gov Shekel 5+ increased by 0.66% and 0.6%, respectively, since the start of the week.

The government bond market is pricing in two interest rate cuts during the year, like the forecast of the Bank of Israel, which stated in its latest interest rate decision that if the war ends at the end of April, the bank would be able to implement two cuts during the year.

Debt and Equity Raising Market:

High debt raising during the last trading week

During the past trading week, the corporate bond market raised a significant amount of approximately NIS 11 billion. The high volume of fundraising was led by banks, which raised about NIS 6.8 billion net this week. Bank Leumi led the banks' fundraising, raising around NIS 4.1 billion in two series—one at a fixed interest rate and a yield to maturity for May 2034, and the other a short-term floating rate series maturing in September 2026. Discount Bank raised about NIS 1.6 billion in two series—a fixed-rate bond with a yield to maturity for February 2032, and a floating rate bond of about NIS 1.2 billion maturing in April 2027. Bank Hapoalim raised a floating rate bond of about NIS 1 billion with a yield to maturity for April 2027. Additionally, insurance companies Migdal and Clal raised about NIS 1.1 billion net this week. Migdal raised about NIS 531 million net in a new series, and Clal Insurance raised about NIS 604 million net in a new series.

Mutual Fund Market—

During the past week, the mutual fund market raised a substantial net amount of approximately 1.8 billion shekels, led by money market funds, funds investing abroad, and funds investing in local bonds. As of April 16, 2026, the total net volume of the passive and active market stood at about 799.5 billion shekels, with cumulative net inflows since the beginning of the year totaling approximately 21.4 billion shekels. After a long period during which the general public redeemed money from mutual funds investing in foreign indices, for the second consecutive week, the public is purchasing mutual funds that track foreign indices, with an inflow of around 437 million shekels this week; about 929 million shekels have been raised since the beginning of the month, while about 4.5 billion shekels have been redeemed since the start of the year. In the mutual funds investing in the local capital market, about 35 million shekels were raised this week, and about 4.5 billion shekels have been raised since the beginning of the year. Money market funds continue to lead the industry, raising around 760 million shekels net this week and about 10.4 billion shekels net since the beginning of the year, as they provide a good alternative to bank deposits, especially during periods when inflation is expected to rise.

Representative exchange rates

During the last trading week, the dollar exchange rate crossed below the 3 shekel per dollar mark, reaching a level not seen in the past three decades. Over the week, the dollar weakened against the shekel by 2%, with the representative rate on Friday standing at 2.996 shekels per dollar. The depreciation of the dollar versus the shekel over the past month stems from a combination of a decline in Israel's risk premium (the 5-year CDS dropped to 71 points on Friday, compared to 82 points on the eve of the war), general weakness in the global dollar, and reduced hedging positions by institutional

investors following sharp rises in U.S. stock indices. Throughout the past week, the dollar weakened against the global currency basket, with the DXY index registering a decrease of about 0.6%. This drop occurred as the risk premium created around the confrontation with Iran eroded and risk appetite in the markets increased. The overall trend this week indicated a shift from preference for safe-haven assets back to investments in riskier assets, mainly due to expectations for geopolitical resolution and the renewal of trade flow through the Strait of Hormuz.

The strengthening of the shekel is expected to continue in the short term, subject to the ongoing ceasefire with Iran and Lebanon and the absence of renewed hostilities. Positive market trends, global dollar weakness, and inflows of foreign investment following a reduction in the risk premium may support the dollar-shekel rate. It is important to consider these changes when making decisions regarding assets with dollar exposure.

Currency	Representative Rate 17/4/2026	Weekly Change	Return from the beginning of April 2026	Return from the beginning of 2026
